Cambridge International Advanced Level

MARK SCHEME for the October/November 2015 series

9701 CHEMISTRY

9701/43 Paper 4 (A2 Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE®, Cambridge International A and AS Level components and some Cambridge O Level components.

Question	Marking Point	Marks	Total Marks
1 (a)	ionic bonds break / bonds between Mg^{2+} and Cl^- break	**2**	
	forces / bonds / attractions form between the ions and water		
(b) (i)	(the energy change) when 1 mole of a substance dissolves in water / becomes aq	**1**	
(ii)	$\Delta H^{\ominus}_{latt}\ MgCl_2 + \Delta H^{\ominus}_{sol}\ MgCl_2 = \Delta H^{\ominus}_{hyd}\ Mg^{2+} + 2\Delta H^{\ominus}_{hyd}\ Cl^-$ $-2524 - 155 = -1925 + 2\Delta H^{\ominus}_{hyd}\ Cl^-$ $= -377\ kJ\,mol^{-1}$	**2**	
(iii)	magnesium / Mg is higher charge / sodium / Na is smaller charge	**2**	
	magnesium / Mg is smaller / sodium / Na is larger		
	Mg stronger attraction for water / Na weaker attraction for water any two		
(c)	• solubility decreases • lattice energy and hydration enthalpy decrease • hydration enthalpy decreases more rapidly / is dominant factor • so (enthalpy change of) solution becomes less exothermic / more endothermic	**4**	
			[Total: 11]
2 (a)	Co $3s^2 3p^6 3d^7 4s^2$ [1] Co^{3+} $3s^2 3p^6 3d^6$ [1]	**2**	
(b) (i)	atom or ion, bonded to (one or more), ligands	**1**	
(ii)	any two from: two (or more) oxidation states, catalytic activity, coloured ions or compounds	**2**
